RESEARCH DESCRIPTION

My research attends to technoscientific development in India, global nuclear regulations, and environmental health governance by centering body, place and ecology in knowledge production about radioactive contamination. In the shadows of data centers and SMR creating water stressed locales across the world, I aim to research how digitalization is transforming world energy systems—an objective underlying the emerging field of digital energetics. Framed by using STS and social anthropology, my inquiry would contribute to debates in the field of digital energetics by weaving together digital, environmental and energy humanities.

RESEARCH INTERESTS

Environmental Humanities, Climate and Multispecies Justice, Environmental Governance and Policy; Feminist Science Studies, Gender Studies, Postcolonial Studies, Public Understanding of Science, Study of Ignorance/Agnotology, Sensory Studies, Violence and Alterity.
